

ABOUT THE PHUNDEX PLATFORM

Phundex has been developed based on years of experience in transforming the way we do business in financial services.

Born out of a desire to streamline how and where you connect with people, processes and technology, Phundex enables you to efficiently manage processes and transactions with internal and external stakeholders, while maintaining data integrity and security.

Designed and built with customers, regular enhancements to functionality and Pathway Templates are driven by client requests. API connectivity and bespoke client customization is also an option.

Transaction management across the
investment lifecycle, reimagined

OUR MISSION

The Phundex mission is to help our clients—by making the end-to-end funding experience faster, easier and more efficient for all stakeholders.

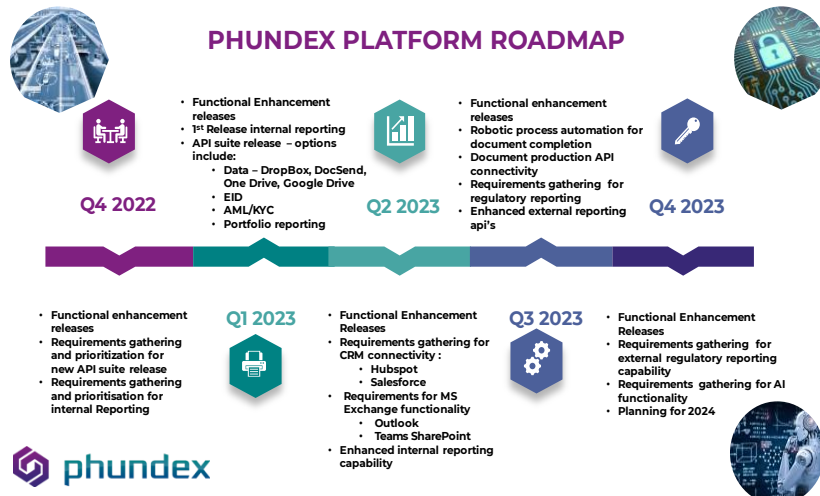

OUR VISION

Our vision is to become the single platform that is the de facto way of doing business across the investment lifecycle.

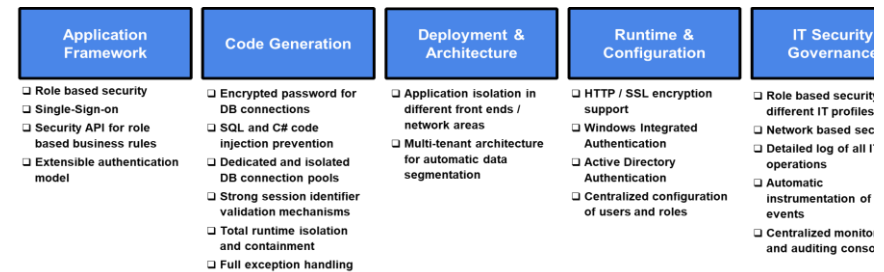

OUR ROADMAP

Quarterly functional releases, led by client demand.

Bespoke build is also available on a consultancy basis

APPLICATION SECURITY

DATA AND DATA CENTRE SECURITY

Data at rest is encrypted using the industry standard AES-256 encryption algorithm, as required. Data in transit is protected using HTTPS/TLS encryption.

- HSTS Enabled – HTTP Strict Transport Security
- HTTPS Enabled for Web Applications and Web Services

Software physical infrastructure is hosted in a private virtual cloud within public cloud Amazon Web Services secure and certified data centres. with multiple layers of operational and physical security to ensure the integrity and safety of data. The data center is manned and supported 24 hours a day, 7 days a week and 365 days a year

- Intrusion detection devices
- Distributed Denial-of-Services mitigation services
- Recurring risk assessments to ensure compliance with industry standards.
